SKILLS

AI & ML: LLMs (Claude, Gemini), LangChain, Agentic Workflows, OCR, Structured Extraction
Languages: JavaScript/TypeScript, Go, Java, Kotlin, SQL/NoSQL, Python
Technologies: Node.js, React, Redux, Next.js, GraphQL, Vite, Temporal, gRPC, Express, Angular
Databases: PostgreSQL, MySQL, MongoDB, Redis
Tools and Systems: Docker, Terraform, Git, CI/CD, AWS, Azure, GCP, DataDog, Playwright, Jest
Concepts: Workflow Orchestration, Multi-Modal AI, Cloud-First Architecture, Domain-Driven Design

EXPERIENCE

PROOF | Denver, CO (Remote)
Software Engineer — October 2025 – Present

- Built agentic document processing pipelines using Google Gemini and Temporal workflows to extract defendants, addresses, court info, and case numbers from legal PDFs via structured LLM outputs
- Developed end-to-end agentic workflows that classify documents, infer job types, apply service rules, and auto-create jobs from uploads, reducing average processing time by over **2 hours**
- Reduced geolocation API spend by approximately **$20,000/year** through Nginx proxy caching, database-level deduplication, exponential backoff retry strategies, and concurrent address validation via Go routines
- Built full-stack features for a legal services platform processing over **$3.65M** in monthly revenue, using Go, React, TypeScript, PostgreSQL, and Redis on Terraform-managed AWS infrastructure

TOUCHBISTRO | Toronto, ON
Senior Full Stack Developer — January 2022 – October 2025

- Developed Point of Sale and Guest Engagement systems, including loyalty programs, customer feedback and marketing tools, online ordering, payment processing, and reporting functionalities
- Spearheaded architectural initiatives to reduce complexity and enhance security, saving over **$10,000/year**. Key achievements included migrating from Grails, adopting cookie-based authentication, transitioning from MySQL to PostgreSQL, and consolidating legacy microservices
- Optimized the mobile architecture by integrating Kotlin with React Native, establishing a more robust client-server model and enabling a scalable multi-device architecture
- Led the development of a shift management feature with Node.js, Next.js, PostgreSQL/Redshift, and Snowflake, adopted by over **1,000 customers**
- Mentored junior developers and led Lunch & Learns to promote skill development and best practices

OMERS | Toronto, ON
Associate Front-End Engineer — September 2020 – January 2022

- Developed an application with Next.js, Redux, and GraphQL to improve pension member support, serving over **600,000 active members**
- Automated a pipeline between JIRA and ServiceNow, reducing subscription costs by over **$15,000/year**

EDUCATION

UNIVERSITY OF TORONTO | HBSc Software Engineering — 2017 - 2022
